SUMMARY

Data scientist with 10+ years designing and analyzing experiments (A/B testing, hypothesis testing, causal inference) and building statistical models that directly inform business and product decisions. Deep hands-on SQL and building large-scale ETL pipelines; proven track record translating ambiguous problems into rigorous, executive-ready recommendations across digital marketing, fintech, and hospitality industry.

TECHNICAL SKILLS

Statistical & Experimentation: A/B Testing, Hypothesis Testing, Causal Inference, Regression Modeling, Time Series Analysis, Cohort & Funnel Analysis, Media Mix Modeling (MMM)

Languages & Modeling: Python, R, SQL, NLP, LLM Fine-Tuning (LoRA/QLoRA), Ensemble Methods, PCA, Decision Trees, Random Forest, Neural Networks

Data & Cloud: AWS (Glue, QuickSight, SageMaker), Snowflake, Hive, Airflow, MySQL, MS SQL, ETL, Docker, Terraform, CI/CD

Visualization: Tableau, Looker, Power BI, Alteryx, Matplotlib, Seaborn, ggplot

PROFESSIONAL EXPERIENCE

WPP Media | New York, NY

Apr 2023 – Present

Manager, Advanced Analytics

- Ran an A/B test on creative variants with segment-level breakdowns (device, user tenure, geography), using chi-square and t-tests to detect interaction effects masked by the overall top-line result.
- Identified media channels with no statistically significant incremental lift ($p > 0.05$) versus one with a significant 8% lift, informing a data-backed recommendation to reallocate budget toward the higher-impact channel.
- Built an MMM regression model using a neural network to capture non-linear media effects, surfacing key sales drivers and informing a data-backed budget allocation recommendation.
- Engineered complex, optimized SQL queries (CTEs, window functions, multi-table joins) across large-scale Snowflake datasets to segment customers by purchase behavior, identifying a high-value at-risk segment that informed a targeted retention campaign.
- Developed a Random Forest machine learning to rank media and marketing variables by importance, identifying the top drivers of sales and redirecting budget toward the highest-leverage channels, improving spend efficiency by 15%.
- Automated end-to-end analytics workflows in Alteryx and Airflow, reducing manual reporting time and improving consistency of month-over-month channel performance analysis reducing lead time by 10%.
- Designed and maintained executive-facing Looker and Tableau dashboards tracking ROI, CPM, and media effectiveness KPIs, enabling leadership to track progress against goals in real time.
- Fine-tuned an open-source LLM (Llama 3.1 8B, LoRA/QLoRA) to auto-tag ad creative by theme and tone, revealing urgency messaging underperformed value messaging and informing a creative shift that improved conversion rate 10%.
- Deployed a trained MMM model into production via a containerized pipeline (Docker, Terraform, CI/CD) with automated retraining and performance monitoring, ensuring consistent accuracy as underlying data shifted over time.

Coinbase | New York, NY

Nov 2021 – Mar 2023

Senior Data Scientist

- Built churn prediction models on customer experience and survey data, applying hypothesis testing to identify key attrition drivers that informed retention initiatives, improving customer retention by 15%.
- Designed row- and column-level security controls for Airflow-orchestrated dashboards, enabling compliant, segmented access to sensitive user analytics across 5+ cross-functional teams while eliminating manual access-request overhead.
- Created and optimized Looker and Tableau dashboards tracking core marketplace KPIs (transaction volume, user engagement, market trends), giving product and growth teams self-serve visibility that cut ad hoc reporting requests by roughly 30%.
- Engineered a candidate-screening pipeline combining document parsing with language-model-based classification to model applicant success probability, improving recruiting funnel efficiency by approximately 20% and reducing manual resume screening time.
- Partnered with cross-functional stakeholders to translate model outputs into executive-ready narratives, directly informing retention and engagement strategy decisions at the leadership level.

ERGO | New York, NY

Mar 2020 – Oct 2021

Senior Data Analyst

- Built machine learning models for customer attrition analysis, deriving statistically significant behavioral features that informed retention strategy and drove a 15% increase in sales.
- Designed marketing performance dashboards and ad-hoc analyses in Tableau and Power BI, delivering timely, data-supported recommendations for campaign strategy.
- Directed a team of data engineers building automated ETL pipelines and warehouses (AWS Glue), improving organization-wide data reliability for decision-making.

GMR Group | Delhi, India

Dec 2015 – Aug 2018

Senior Engineer

- Led a team analyzing scraped, multi-source travel data to uncover seasonal booking trends, informing pricing and strategy decisions that boosted profitability by 10%.
- Built regression and logistic models for predictive document-processing and customer retention use cases.
- Communicated complex quantitative findings to cross-functional audiences (product, engineering, executives), translating ambiguous problems into structured, hypothesis-driven recommendations.

ITC Limited | Delhi, India

Aug 2012 – Nov 2015

Junior Engineer

- Built time-series KPI monitoring processes (RevPAR, ADR, GOPPAR), driving an 11% increase in profitability.
- Redesigned SQL database schemas, scripts, and stored procedures, cutting query processing time by 20%.
- Centralized multi-source data integration, improving data accuracy and availability by 25% for downstream analysis.

EDUCATION

University of Maryland, Robert H. Smith School of Business - M.S., Business Analytics

Dec 2019

Maharshi Dayanand University - Bachelor of Technology, Mechanical Engineering

Jul 2012
